---

There are thousands of moth species in the northeast of North America, and while it might seem that they are all drab grays and browns, there is actually a startling variety. They come in a rainbow of colors, from brilliant oranges and pinks to soft greens and violets. There are moths with colorful leopard-like spots, and ones that look more like B-movie aliens; some that are as large as your hand, and others the size of a grain of rice. With helpful tips on how to attract and identify moths, range maps and season graphs showing when and where to find each species, and clear photographs that use the unique Peterson arrow system for easy identification, this guide provides everything an amateur or experienced moth-watcher needs. Sponsored by the National Wildlife Federation and the Roger Tory Peterson Institute.

DAVID BEADLE has been studying and photographing moths in the province of Ontario for more than twenty years.

SEABROOKE LECKIE is a freelance biologist and writer with a passion for nature, especially moths.

DAVID BEADLE is a professional freelance bird illustrator who happens to have a passion for moths. He has been interested in moths for over thirty years, both in his native UK and in Ontario, Canada. For the past two decades he has traveled extensively within Ontario documenting and photographing moths. He has a particular interest in identification and feels it is important to portray these fascinating creatures alive and in their natural resting positions.

SEABROOKE LECKIE is a freelance writer and naturalist who became interested in moths after realizing they suited her night-owl tendencies much better than birds. She lives in eastern Ontario with her husband and two young kids, with whom she enjoys roaming their rural yard and discovering its inhabitants, six-legged and otherwise.
