Recently profiled in the New York Times Magazine. Dean Radin is perhaps the most respected parapsychology authority in the country. An articulate, engaging communicator, Radin wields impeccable credentials, a healthy skepticism and a meticulous scientific method to put "psi" phenomena like telepathy, clairvoyance, precognition and mind-over-matter abilities to the hard test of science. His unprecedented manifesto makes a startlingly persuasive case for the truth of psychic phenomena -- and places us on the cusp of what may well be the next great paradigm shift.

Uniting the latest in high-tech experiments, including irrefutable data from his own groundbreaking research, with teachings of mystics and theories of quantum physics, Radin explores myriad phenomena: from ESP to ghosts to psychokinesis. Radin reveals the remarkable extent to which psi is already tacitly acknowledged -- and exploited -- by Fortune 500 corporations and the U.S. government, then analyzes how the inevitable mass acceptance of the mind-matter link will affect social, economic, academic, health and spiritual issues. At once visionary and pragmatic, *The Conscious Universe* recalls the classics Godel, Escher, Bach and *The Holographic Universe*, yet transcends mere experiments to offer a bold new vision of the future.

Holding up such anomalies as ESP, psychokinesis, prayer, near-death experiences, and reincarnation under the cool light of scientific scrutiny can be a daunting task. Dean Radin, director of the Consciousness Research Laboratory at the University of Nevada, rises to the challenge in the pioneering and exhaustively researched *The Conscious Universe*. Fans of *The X-Files* will need no further convincing, but for the remaining skeptics, this easy-to-read mix of history, scientific evidence, and proclamations ("When modern science began about three hundred years ago, one of the consequences of separating mind and matter was that science slowly lost its mind.") will authenticate the existence of psychic phenomena.

Radin creates two categories: the perceiving of objects or events beyond our ordinary sense capabilities and the triggering or influencing of action through mental powers. Radin aims to present simply and clearly the basic elements from science, psychology, and physics that prove the existence of psychic phenomena. Given the tacit acceptance of psychic phenomena as "real," why do both government and mainstream science repudiate the claims and the evidence, yet continue to exploit them?

The Conscious Universe challenges our most basic assumptions about reality, those that exist in both the upper echelons of science and in the basic daily interactions. It's a mind-bending exploration of how and what we see.

Director of the Consciousness Research Laboratory at the University of Nevada at Las Vegas and twice president of the Parapsychology Association, Dean Radin, Ph.D., has done cutting-edge parapsychology research for AT&T, Stanford, Princeton's Engineering Anomalies Research Lab, the University of Edinburgh, S.R.I. International, and the U.S. Government. He lives in Las Vegas, NV.
