Stories bring world history to life

This program helps students of all abilities see the relevance of world history in their lives with stories of the world's people, including events from the earliest times to the present. The manageable, single-concept approach and multi-faceted support helps students successfully meet curriculum requirements.

How to face 'the faces' of CARDIAC PACING, How to face 'the faces' of cardiac pacing represents an editor's compiled selection of lectures on cardiac pacing and electrophysiology. Electrical stimulation of the heart is an ever-changing and, at times, explosive field. The number of implanting centres is growing tremendously and pacing is not exclusively confined to arrhythmologists. Therefore, the editors attempted to organize a course being both practical in daily clinical management and instructive in understanding technical concepts. The glossary of terms have to be clearly understood before one is able to interpret the complex electrocardiograms of DDD and especially DDDR pacemakers. Those electrocardiograms have to be approached in a systematic way, using a step-by-step analysis. The main clinical symptom requiring pacemaker implantation is syncope. It cannot be over-emphasized that syncope is a clinical diagnosis merely based on history and physical examination. The organization of a pacemaker follow-up clinic depends on local facilities and needs. The effectiveness of pacing controls markedly increases when using a systematic approach. Repeated optimal adjustment of programmable functions is part of the control. Antiarrhythmic drugs are losing popularity in the treatment of tachyarrhythmias. Nonpharmacologic treatment (antitachypacing, implantable defibrillators and antiarrhythmic surgery) at the present time have definite indications, probably expanding in the future. When complexity in electronic devices increases, repercussions on expenses, either by the government or social and private insurances, needs consideration.
